MOBILE APP WIREFRAMING

Low-Fidelity Mobile Application Design Task

Task	Mobile App Wireframing
Design Level	Low-Fidelity Wireframes
Recommended Tools	Figma / Adobe XD
Primary Goal	Understand early-stage design planning and user flow creation

This document converts the supplied Mobile App Wireframing task brief into a structured, submission-ready format suitable for storing in a GitHub repository.

1. Task Overview

The task is to design low-fidelity wireframes for a mobile application. The work focuses on understanding user needs, planning the user experience, creating basic screen layouts, and documenting the design thinking process.

2. Task Tutorial

Watch the task tutorial provided in the brief: Mobile App Wireframing – Task Tutorial

3. Key Features / Activities

#	Activity	Description
1	Conduct Basic User Research	Identify and understand the basic needs of the intended users.
2	Create User Personas	Represent the target users and their needs in a simple persona format.
3	Create User Flows	Map the sequence of actions a user follows while interacting with the application.
4	Design Low-Fidelity Wireframes	Create simple early-stage screen layouts using Figma or Adobe XD.
5	Document the Design Thinking Process	Record the process followed from understanding user needs to creating the wireframes

4. Suggested Design Thinking Flow

- **User Research** → Understand basic user needs
- **User Persona** → Define the target user
- **User Flow** → Plan the user's sequence of actions
- **Low-Fidelity Wireframes** → Sketch the application screens
- **Documentation** → Record the design thinking process

5. Expected Outcome

The expected outcome is an understanding of early-stage design planning and user flow creation. The completed work should demonstrate how user needs can be translated into basic application structure and low-fidelity screen designs.

6. Suggested GitHub Repository Structure

File / Folder	Purpose
README.md	Project overview and task description
research/	Basic user research notes
personas/	User persona documentation

File / Folder	Purpose
user-flow/	User flow diagram or documentation
wireframes/	Low-fidelity wireframe exports/images
design-process/	Design thinking process documentation
Mobile_App_Wireframing.pdf	This consolidated task document

7. Submission Checklist

- ■ Basic user research completed
- ■ User persona created
- ■ User flow created
- ■ Low-fidelity wireframes created in Figma or Adobe XD
- ■ Design thinking process documented
- ■ Wireframes exported and organized
- ■ Final PDF and supporting files added to GitHub
